

Designing Your AAA Sequence

Use this section to map AAA at both scales: the full experience and the next lesson.

Name of Experience / Module / Pipeline:

Stage 1: Application

7. What real thing will the learner touch, test, make, or play with immediately?

The real classroom items would be the computers and whiteboard.
However, there will also be collaboration with team members
and fellow classmates. Outside of the class, it is only my laptop
and outside experience.

8. What productive friction do you want them to encounter here? What misconception should fail safely?

Mental issues and imposter syndrome.
A comfortable and quality group of friends, but the mental battle
is always one of the biggest hurdles.

Stage 2: Action

9. What are the 3-5 core concepts, definitions, or moves that should arrive only after Stage 1?

Stage 1 is the application where brainstorming and foundational thoughts begin. This is where the first processes and mental connections are made. As for Stage 2, this is where you begin working on the habit that you essentially laid out in Stage 1. Build the habit and continue to progress through preliminary difficulties.

10. How will the learner use those ideas to refine what they already began?

It is all a matter of changing the mindset to become stronger. Once the habit is built, it is a matter of continuing the cycle. Not allowing the minor slip-ups to deter them from the main goal.

Stage 3: Amplification

11. What bigger frameworks, professional practices, or collaborative contexts will open here?

Now that it is proven to be something you are invested in, through your time and efforts, new channels among peers and mentors will open up. More knowledge will be accessible to learn, however, just because the foundation is built does not mean things will get easier. Likely harder since you are aware of much more you don't know.

12. How does AAA work at the macro scale of the full experience and at the micro scale of one lesson or node?

AAA is the whole roadmap on the macroscale. It is the direct guideline for how you can do what you need to do. With that said, everything is easier said than actually done.

At the microscale, it breaks things down to the smallest form.

It stops you from getting ahead of yourself and slows you down to the smallest level. All things big were once small.
